About me

Greetings!

Creativity has been a core part of my life since childhood — I've always been passionate about making, inventing, and bringing new ideas to life. For me, architecture is not just about buildings; it's about shaping experiences, emotions, and possibilities. I love designing anything I can imagine and create with both my hands and my mind.

I'm an architect with over 10 years of experience in the design of residential, office, and industrial buildings, as well as restoration and urban design projects. I hold a Master's degree in Architecture and Urban Design. My main tools are Autodesk Revit and Enscape, and I'm also skilled in AutoCAD and Adobe Photoshop.

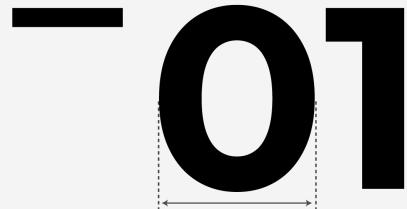

In addition to architectural design — which has been the main focus of my professional career — I have hands-on experience in construction supervision. I'm a certified Grade One Supervisor and Designer, accredited by the Engineering Organization of Iran.

I approach design with a minimalist, curious, and intentional mindset — always aiming for simplicity, precision, and inspiration.

Project

316, Main street, Tabriz

Project 1: Staggered Residential Tower

DESIGN CONCEPT:

This 8-story residential building prioritizes privacy with half-level staggered units, giving each apartment a sense of independence. Two basement levels and ground-floor retail units enhance economic efficiency, while floor-to-ceiling windows and terraces maximize light, views, and spaciousness. Careful planning filters private and public zones within each unit, creating functional and comfortable living spaces.

MATERIALS USED:

The project features a harmonious combination of dry-laid brick panels and durable exterior wood on the facade, creating texture, warmth, and visual interest. Inside, warm wooden flooring enhances the cozy and inviting atmosphere, while neutral finishes and natural light reinforce comfort and a sense of home. This material palette balances aesthetic appeal, durability, and residential warmth, resulting in a unified and engaging architectural expression.

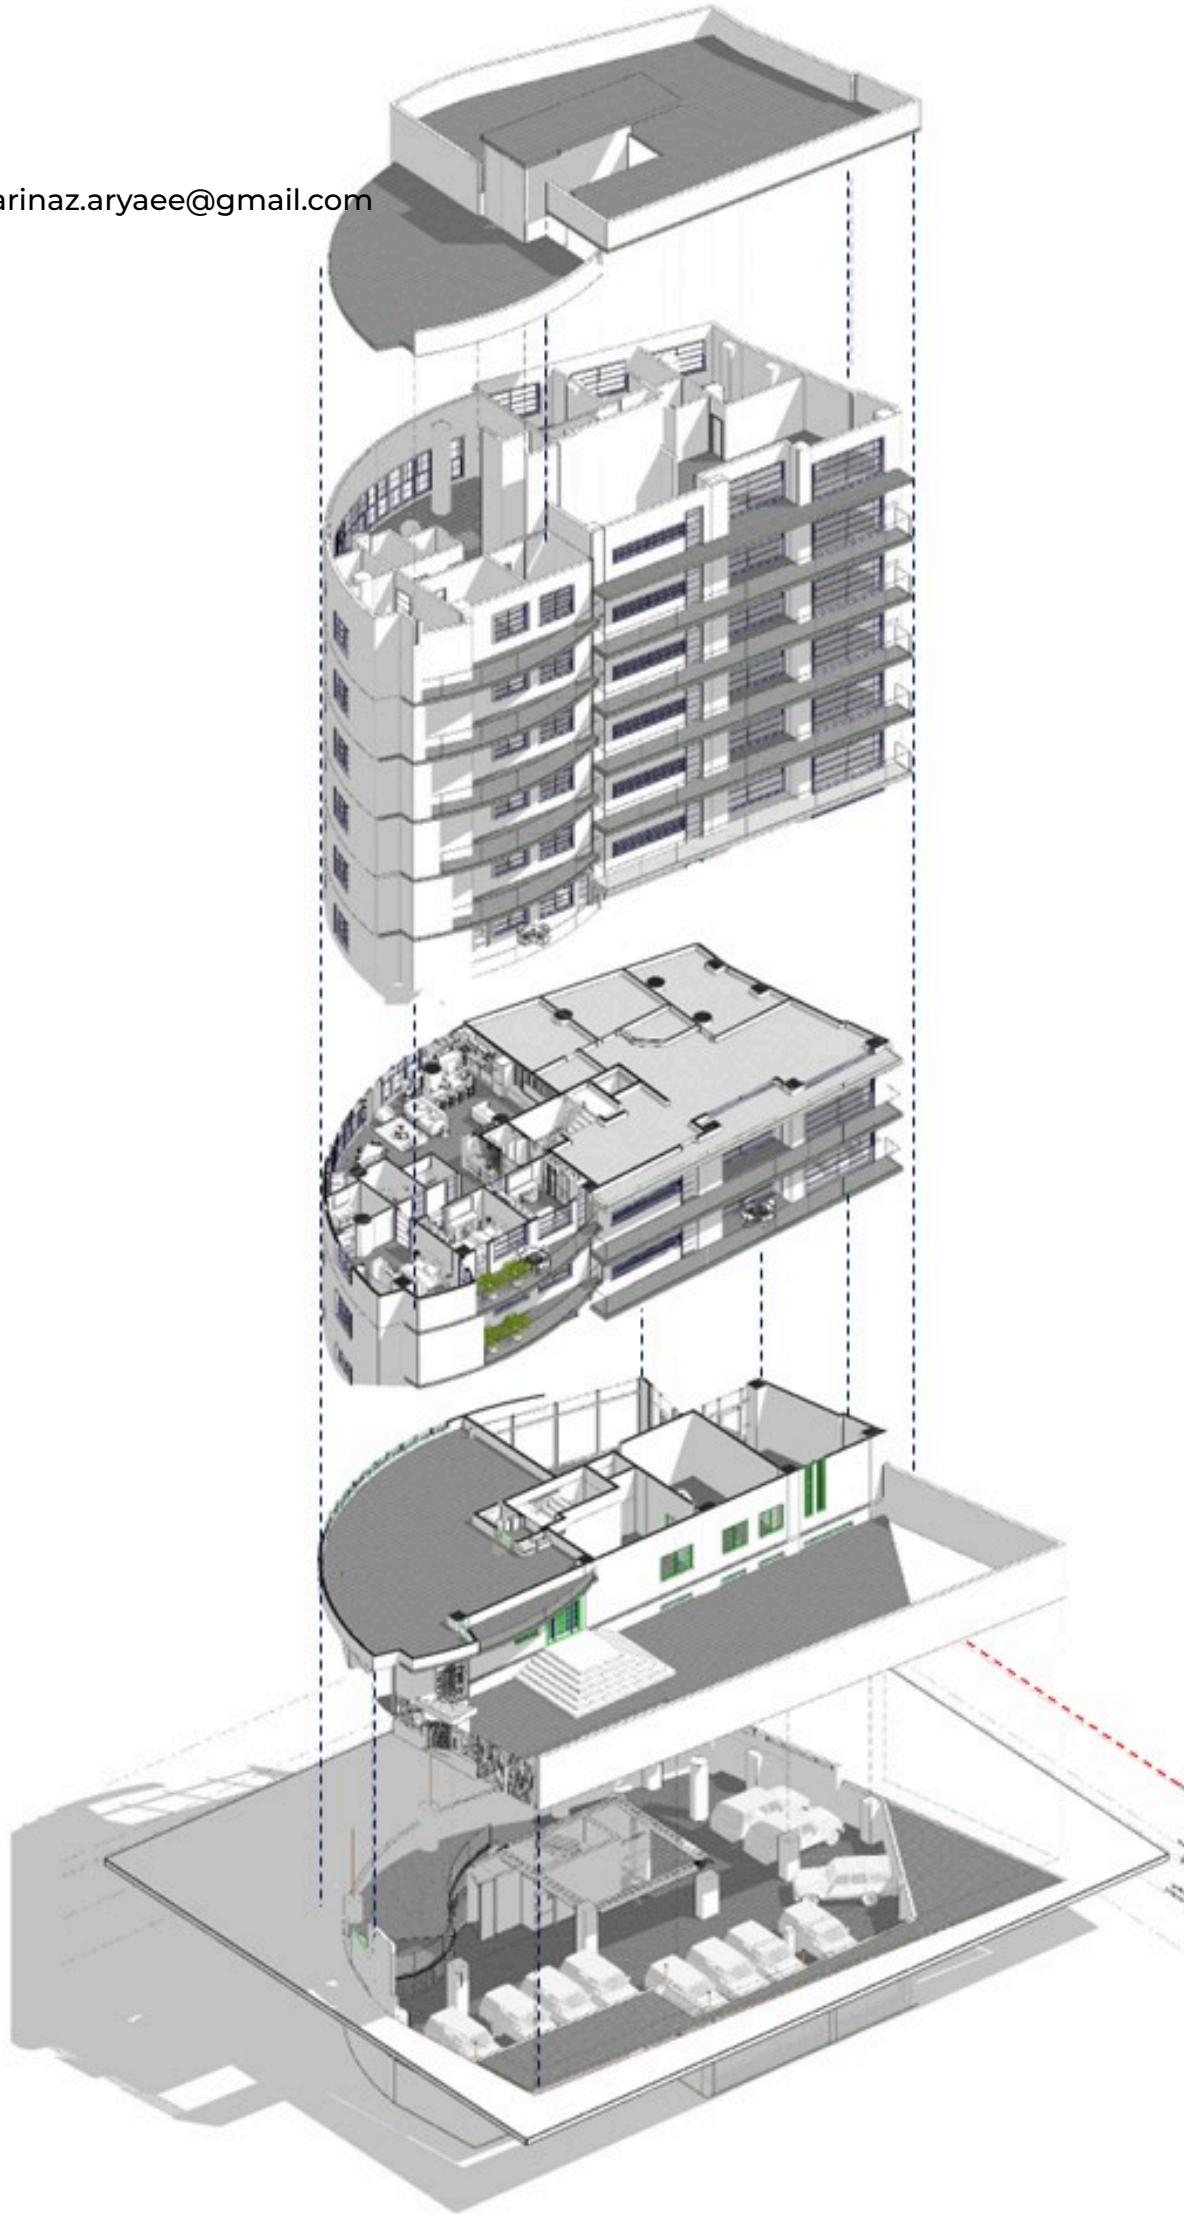

Key Information:

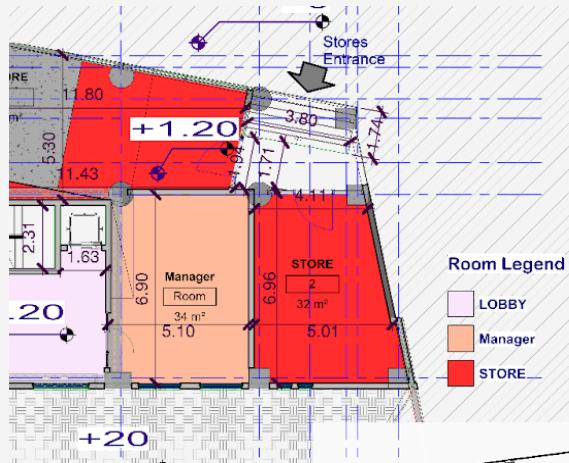

DESIGN CONCEPT:

The client sought a modern, sustainable residence that would serve as a peaceful urban oasis, offering a retreat from the bustling city life.

Project 1: Contemporary Urban Retreat

Detailed architectural blueprints include floor plans, sections, and elevations, highlighting the half-level staggered apartments, parking layouts, and ground-floor retail integration. The plans reflect functional zoning, privacy considerations, and optimized spatial organization throughout the building.

The building footprint strategically positions street-facing retail units for direct visibility and access, while basement parking is accessed from the side alley to minimize street congestion.

The main residential entrance opens to a private courtyard, creating a welcoming, home-like experience. Commercial spaces are fully isolated from residential areas, ensuring tranquility for residents. This arrangement carefully balances privacy, light, and functional circulation across the site.

Project

Turtle Beach, Kish Island

Project 2: Marine Environmental Research & Education Center – Kish Island

DESIGN CONCEPT:

Located at Turtle Beach on Kish Island, the project draws inspiration from the geometry of the turtle shell, a natural symbol of protection and resilience. The shell's modular hexagonal pattern informed the dome structure, while the building itself blends into the ground as an extension of the landscape. This creates both a sculptural presence and a walkable roofscape, allowing visitors to ascend the structure and experience panoramic views of the island. The concept merges nature, research, and education into a single architectural gesture that celebrates marine life and ecological awareness.

ARCHITECTURAL STYLE:

The architectural expression is defined by an organic and biomimetic form, reinterpreting natural geometries into a contemporary cultural landmark. A lightweight dome with a perforated hexagonal skin creates a dynamic play of light and shadow, echoing the pattern of a turtle shell. The building's accessible roof and fluid circulation emphasize openness, interaction, and continuity with the landscape. The result is a futuristic yet context-driven architecture, balancing iconic form with environmental sensitivity.

Project 5: Modern & Transparent Office Space Design in Istanbul

Project description.

This was a minimalist interior design project for an office space located in Istanbul. The design focused on clarity and openness, creating a transparent and welcoming environment for work.

A bold red accent was strategically used throughout the space to bring sharpness and contrast beautifully with neutral tones.

The final implementation reflects a clean, functional, and modern workspace, prioritizing productivity and professionalism.
